

# CAS 120B-HR

## High Resolution Array Spectroradiometer

### Key features at a glance

- ▲ High resolution down to 0.12 nm FWHM, 0.05 nm data point interval
- ▲ High-performance and cost-effective for production and laboratory
- ▲ Down to 4 ms integration time
- ▲ Integrated density filter wheel

The high resolution CAS 120B-HR is the successor of Instrument Systems' very successful CAS 120-HR with enhanced spectral resolution. Particularly designed for the measurement of narrow band emitters, e.g. laser diodes, the CAS 120B-HR combines high spectral resolution and short testing times for sophisticated and price-sensitive production and laboratory applications.

### \\ VERY HIGH SPECTRAL RESOLUTION

The CAS 120B-HR achieves very high spectral resolutions down to 0.12 nm (0.05 nm data point interval) for a spectral measuring range of 80 nm. Further spectral ranges in the NIR and VIS are available upon request.

### \\ BACK-ILLUMINATED CCD SENSOR

A back-thinned and back-illuminated CCD array sensor with 2048 x 16 pixels is used for detection in the CAS 120B-HR. This sensor design in combination with hardware binning of the vertical pixels offers a high level of sensitivity and large dynamic range (5500 : 1). The CCD allows capturing the spectrum of an optical emitter in a single exposure. Additionally, short integration times down to 4 ms make the CAS 120B-HR particularly suitable for the measurement of emitters with pulsed and continuous operating modes.
